 - CMS development
 - Quality Assurance
 - Ongoing support for modifications and improvements after project launch
-

Development Life-cycle

- Do we have ability to develop the full stack (Backend, Web, Android, iPhone)?

Yes

- Tools commonly used for the organization of work (ticket system, version control,...):

Redmine, Jira, Gemini, Asana, Confluence, Bitbucket, Git, GitHub

- Do we able to work on multiple projects at the same time?

Yes

- How are business requirements transferred to the developers:

StableFlow can dedicate technical Project Manager (PM) with fluent English for project(s) coordination or client can communicate with the developers directly.

- Development process (with PM):

PM will lead client through all steps of the process to implement the best practices and IT strategy. PM will be in a constant touch with the client via email, phone and instant messengers to ensure that client requirements, feedback and comments are timely reflected in the technical specifications on all stages of the project and to ensure the highest conformity of the end product to the client vision. PM will be in direct contact with the development team and report on project status to client.

All the work will be performed on the StableFlow development server. Client will be granted access to the development server, source control and thus provided with the ability to monitor development progress. During the development stage, client will be updated on the status of the project regularly by PM, showed screenshots, schemes or other visual results of the work. PM will take into consideration client comments and take corrective actions where appropriate.

- How do we ensure the quality of the developed software:

StableFlow has a Quality Assurance department. This department is responsible for testing control of all software developed in the company. Testing team is responsible for finding and documenting bugs, defects and weak points of software, providing the PM and development team with information on detected problems.

- How do we ensure proper documentation of the code:

StableFlow use PHP Storm and PHP Code Sniffer Tool, also modern IDE force developers to document all input and return parameters of all functions. This approach also allows to create separate development documentation from all comments in code.

Support

Additional support can include:

- Ongoing support for modifications and improvements after project launch. Experts with specific skills can be involved on as-needed basis for particular tasks or dedicated for full-time
 - Predefined and scheduled hours of developers support according to specified hourly rate
 - Extra QA and administrators support according to specified hourly rate
 - Stress testing of a system (to find out how much users it can handle)
-

Experience

Websites, produced with design supplied:

<http://4checkers.de>

4Checkers.de is a service that allows you to create checklists on various matters online and in the community. It is a system that helps its users to manage their life and thereby saves his administrators unnecessary headaches. On 4Checkers.de you can create checklists on all sorts of topics, from "How do I find the right place to study?", or "What to do when moving?" to "What is important when you fill-out the tax return?" Created, discussed and shared.

In addition to a specific backend for the administration team (management of users and checklists, CMS access, Ticket and newsletter system), StableFlow has developed a Facebook-Connect, ease the use of the system by implementing the "drag-and-drop" functionality, Responsive Web Design, iOS and Android applications.

<http://www.gifthulk.com>

GiftHulk.com is a rewards site, that offers its members multiple ways to earn unique virtual currency – Hulk Coins. Those Coins can later be redeemed for a wide variety of items in Hulk Store. There are many different ways for to earn Hulk Coins - use GiftHulk Search as search engine y, complete free surveys, offers, tasks, watch GiftHulk TV videos, ...

StableFlow has developed GiftHulk using WordPress CMS. During the project custom search plugin was developed. GiftHulk Search uses Bing and Yahoo search engines to provide the most relevant search results.

<http://visitwestlothian.co.uk>

Website is complete guide to travel, accommodation, places to visit, activities and events in the West Lothian, Scotland

Websites, produced including full design:

<http://myappybusiness.com>

StableFlow has created the unique system of applications generation. The main idea is to allow restaurant/salon/clinic owners get the customized iOS application to expand the target market in 1 day. For data security StableFlow team has managed the different levels of access (top admin, admin, owner, user) on the server part too.

<http://www.goshna.org>

Website for collecting donations to orthodox jewish schools. StableFlow has developed Goshna website using WordPress CMS, integrated with a number of APIs: Random.org, Limelight CRM, Awe.sm

<http://www.wayby.com>

Wayby is website and service for searching, reserving and buying the flight tickets all over the world. StableFlow has developed website and custom CRM tool.

Projects, where StableFlow took other people's code and added new functions:

In most cases our customers wanted:

1. To add new features to existing application
2. To continue development with a new team
3. To redesign/redevelop website/application

Depending on the initial progress and framework we have offered a variety of solutions ranging from continued development on the original framework to develop application from scratch.

<http://it.shout.eu>

Shout is the first European network created by consumers, for consumers seeking great deals, coupon codes and consumer advice. Registration is free and open to everyone wishing to share information about buying opportunities, enquire about products and services, and request specific deals and discounts.

The customer decided to change the development team. Our team has dedicated professionals to implement all the required functionality and latest bootstrap technologies for users' usability, and logged more than 10,000 hours to bring the project to a proper level.

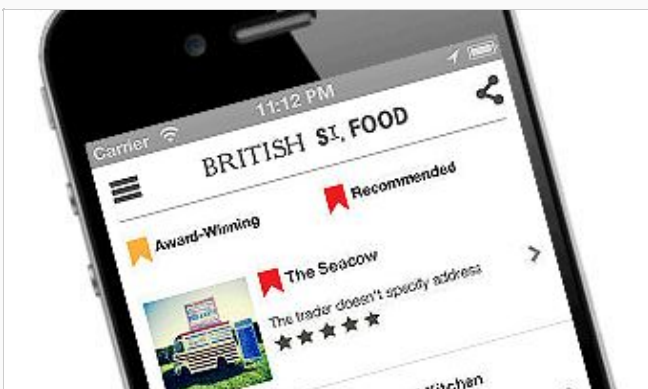

Mobile Applications, produced with design supplied:

<https://itunes.apple.com/en/app/bloop-london/id609616588?mt=8>

bloop. LONDON is an internet music application, streamed from terminal studio of new radio station based within the shadow of The Shard in London broadcasting 24/7 electronic music.

StableFlow has developed iOS application and used radio automation software "Airtime" to create backend allowing control radio station via the web.

<https://itunes.apple.com/us/app/britishst.food/id675268916?mt=8>

The application represents the biggest street food community in great Britain. It showcases the best street food in Britain. It's revolutionary, with live GPS maps showing who's trading with the street food in Britain where and when. It details the specials of the best traders, and encourages punters to photograph – and review – their food. And, for the first time, it allowed people to vote for their favourite traders at the British Street Food Awards.

StableFlow has developed iOS application for zapper.co.uk - website helping users to sell books, CDs, DVDs and games for cash. Application works with Barcode Scanning.

<https://itunes.apple.com/gb/app/zapper.co.uk-sell-your-books/id654706510>

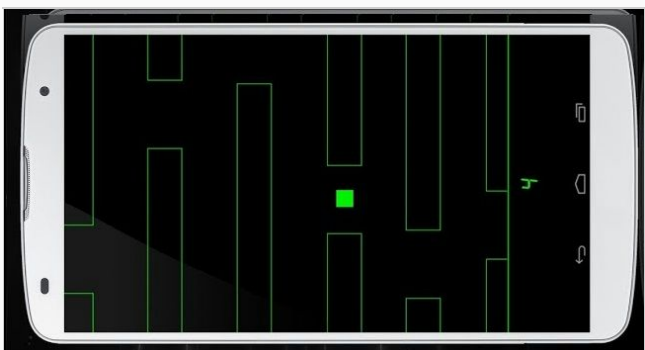

The application is a gallery portfolio of Dexter Moren Associates - a London based design practice offering urban design, architecture and interior design.

<https://itunes.apple.com/en/app/dexter-moren/id580768802?mt=8>

StableFlow has developed a groundbreaking solution to bring personal training into your home. The 6 Pack Promise brings you the same exact ab workouts used to keep today's elite professional athletes in game-ready shape while helping them carve out 6 pack abs.

<https://play.google.com/store/apps/details?id=com.sf.athx>

StableFlow has developed a great game with "Old School" 1980s vector graphics and contemporary gameplay.
